ALLOY DESCRIPTION AND APPLICATION:
Washington Alloy ERTi-5 commonly called “6-4” is a TIG, MIG, and submerged arc filler metal use for welding alloyed Titanium with 6% & Aluminum 4%. This grade is common in the Titanium fillers due to its relatively low cost and good availability. With its high tensile strengths and good weld ability it can be heat treated to exhibits a higher fatigue, toughness found in petrochemical, aircrafts components, turbine parts and blades. Its corrosion resistance is generally compared to Grade 2 but yield a higher strength.

TYPICAL GTAW WELDING PROCEDURES; DCEN with EWTh-2 truncated conical tip

Procedures may vary with change in position, base metals, filler metals, equipment and other changes.

WIRE CHEMISTRY (%) & WELD METAL Requirements

- Carbon: 0.05 max, Tensile Strength (psi) 130,000
- Oxygen: 0.12-0.20, Yield Strength (psi) 120,000
- Nitrogen: 0.03 max, Elongation 10%
- Hydrogen: 0.015 max
- Iron: 0.22 max
- Aluminum: 5.5-6.75
- Vanadium: 3.4-4.5

AVAILABLE SIZES: TU ERTI-5 = Spools of 030, 035, 045
TU ERTI-5 = Cut lengths of 030, 035, 045, 1/16, 3/32, 1/8, 5/32
Other sizes available – please inquire

SPECIFICATIONS: ANSI/AWS A5.16 ERTi-5
ERTi-5ELI is now ERTi-23 ELI = extra low interstitial elements
